The table reports the margins (predicted means of relative need evaluations) $\overline{\Delta}_{\alpha,\beta}$ estimated by Tobit regression, see Table 5, Model (I). First row: mean; second row: standard error in parentheses. Margins significantly different from zero are marked with asterisks. χ^2 of a Wald test on the equality of two margins. Significance levels: $^{*}\, p < 0.10$, $^{**}\, p < 0.05$, $^{***}\, p < 0.01$. Wald tests with Bonferroni correction.
